

arenium ions

Cations derived formally by the addition of a hydron or other cationic species to any position of an arene, e.g. C_6H_7^+ , benzenium. The term includes:

1. Arenium σ -adducts (Wheland intermediates) (which are considered to be intermediates in electrophilic aromatic substitution reactions) and other cyclohexadienyl cations.

+

2. Arenium π -adducts, such as:

+

[σ -adduct (sigma-adduct), π -adduct (pi-adduct)].

See: aryl cations
