

multi-strand macromolecule

Also contains definition of: *n*-strand molecule

A macromolecule that comprises constitutional units connected in such a way that adjacent constitutional units are joined to each other through more than four atoms, more than two on at least one side of each constitutional unit.

Note:

A macromolecule that comprises constitutional units joined to each other through *n* atoms on at least one side of each constitutional unit is termed an *n*-strand macromolecule, e.g. three-strand macromolecule. If an ambiguity exists in defining *n*, the highest possible number is selected.
